

Mk100

Uni-Directional Microphone for DSLR & Video

Broadcast Quality Electret Condenser Microphone

This Microphone is designed for use with modern DSLR's, Camcorders and Audio Recorders. The hähnel Mk100 is fitted with a 14mm electret condenser capsule which produces high quality audio with a uni-directional pick-up. This is achieved using a Super Cardioid design, ensuring maximum sound input from the front of the microphone, resulting in targeted audio recordings with minimum interference from both sides and behind.

In addition the MK100 is fitted with a unique rubber suspension system known as a "Shockmount". This shockmount absorbs unwanted mechanical vibrations from the camera.

The 3 position volume sensitivity switch has -10, 0, +10 settings. This allows the user to optimise the microphone performance when recording both high and low level audio.

A Low Cut setting minimises wind noise.

Readily available AAA batteries are included, giving over 100 hours running time.

Fitted with a Hot Shoe adaptor and a 1/4" thread, the MK100 fits easily on any camera, boompole, monopod & tripod.

Good video deserves great sound
